2. API - all routes verified

POST signup: 201, duplicate 400

POST auth: 200 token, invalid 400

POST games staff: 201; no token 401; customer 403

POST listings: 201; no token 401; bad game 404; bad condition 422

GET listings: 200 nested game; filter NSW; bad platform 422

POST rentals staff: 201 Rented; bad 404; no token 401

POST payment staff: 201; no token 401

PUT rentals: 201 Available; bad id 404; no payment 422

POST sell owner: 200 Sold; non-owner 403; no token 401

3. Postman

Import postman collection. Base URL <http://127.0.0.1:5000>. Auth first, Bearer token. Negative case per protected route.

4. UAT - Test Sell Game

Pre: owner owns Available listing. Steps: auth, sell, list. Criteria: 200 Sold; non-owner 403; re-sell 400.

5. Notes

Customer = User regular_user. Staff = admin/staff + StaffService. PUT returns 201 per spec. See README.
